City of Washington c/o Jim W. Snider, City Administrator 301 Walnut Street Washington, IL 61571

Re: City of Washington Phase 2B Trunk Sewer Project - Cost-effectiveness Analysis - Addendum

Dear Mr. Snider:

Please accept this letter and the attached documentation as an Addendum to the July 17, 2023 letter and attachments. Our strict application of the rule that trenchless construction means and methods be applied to areas that are 30' deep or deeper requires that we convert certain stretches along all route alignments that had previously been considered eligible for open-cut construction to the trenchless construction column. We have identified these converted areas on the attached plans and profiles with a red triangle for your ready review. These adjustments are relatively minor and, in our opinion, do not change the cost-effectiveness conclusions outlined in our July 17, 2023 letter.

Giving consideration to the adjustments made to the plans and profiles for the route alignments as depicted in the Addendum, the table of facts that drive the cost-effectiveness analysis of the route alignments has been updated as follows:

Phase 2B Alternative Total Estimated Avg. MH Depth/ Farm Creek/New Avg. Open- Total LF

Route Alignments Costs Deepest MH RR Crossings Cut Depth Trenchless

Ro	ute Alignments	Costs	Deepest MH	RR Crossings	Cut Depth	Trenchless
•	County Route:	\$10,093,649	22.5'/46'	6/3 20	).6° 3	<b>,78</b> 4
•	City Route - N:	\$ 8,203,934	19.9'/44'	0/2 18	3.2' 2	,102
•	City Route - S:	\$ 8,069,736	20.7'/33'	2/2 19	9.6' 1	,970
•	City Route - S Alt:	\$ 8,487,406	19.7'/34'	0/2 18	3.3' 2,2	280

We look forward to presenting our work to the City Council during the work session scheduled for September 11, 2023. We will be reaching out to you to discuss the logistics of our presentation as the scheduled date approaches. In the meantime, please feel free to reach out to me with any questions or clarifications.

Devin Moose, P.E., Director

T.O.C.

## **GENERAL INFORMATION**

### PURPOSE:

During the seventeen-month period following the placement of the Project on indefinite hold by the City, Goat Springs and APTIM promptly went to work to develop Preliminary Concept Plans and Profiles for four (4) previously recognized route alignments that had been shared with the City and HCE. The purpose and goal of completing this project was to determine the most cost-effective route alignment for the Phase 2B Farm Creek Trunk Sewer Project and to do so by applying objective, fact-based engineering methods that would withstand public scrutiny:

- Only previously recognized route alignments were studied
- Use of LIDAR-based elevations and topography uploaded from Tazewell County
- Equal and consistent application of rules that serve as cost drivers: (i) the depth at which the pipe installation means and methods of construction transitions from open-cut to trenchless was 30' [applied by Strand in the July 26, 2021 Strand OPCC for Strand Route B], (ii) use of steel-cased pipe materials applied to all trenchless pipe installation, impaired US Water crossings [i.e. Farm Creek] and underneath existing improvements [i.e. Railroad crossings, existing infrastructure, etc.]
- The unit costs used to calculate the total costs for each route alignment studied were the same unit costs used by Strand as depicted in the Strand OPCC for the Strand Route B dated July 26, 2021 [established in February 2020]

No adjustments were made to the previously recognized route alignments. All three of the City route alignments studied were previously designed in a manner consistent with the design criteria outlined below [See Evaluation Criteria below]. The reason for this is to provide a document that is accurate, fact-based and objective, and capable of supporting policy decisions to be made by the City Council that are consistent with preserving and enhancing the public's health, safety and welfare.

## GENERAL INFORMATION

#### FINDINGS:

WHAT YOU WILL FIND IN THE FOLLOWING ANALYSIS:

- PROOF AS JUSTIFICATION TO THE LOGIC BEHIND THE ROUTE SELECTION SUPPORTING THAT OF CITY ROUTE NORTH (ALSO KNOWN AS ROUTE E-3 SUBMITTED BY THE GOAT SPRINGS TEAM) AS THE RECOMMENDED ROUTE.
- THREE CITY ROUTES ANALYZED WITHIN ARE SUPERIOR TO THE PROPOSED COUNTY ROUTE, ALSO KNOWN AS STRAND ROUTE B.

CITY ROUTE - NORTH, (ROUTE E-3 - G.S.T. VERSION, NOT HAMILTON'S):

- A MORE COST-EFFECTIVE SOLUTION FOR INITIAL INSTALLATION (ALL THINGS CONSIDERED EQUALLY)
- A MORE COST-EFFECTIVE SOLUTION OVER ITS LIFE-CYCLE FOR OPERATING AND MAINTAINING THIS NEW CITY IMPROVEMENT
- THE BEST OVERALL ROUTE IN TERMS OF CONSTRUCTABILITY (WITH 15 CONSTRUCTABILITY CATEGORIES GRADED)
   HAS MUCH LESS AMOUNT OF EXPENSIVE TRENCHLESS CONSTRUCTION THAN THE COUNTY ROUTE
- HAS THE SHALLOWEST OVERALL AVERAGE DEPTH OF OPEN-CUT PIPE INSTALLATION OVER ITS ENTIRE ROUTE
- HAS THE LEAST AMOUNT OF IMPACT ON THE ENVIRONMENT
- A NEW CITY UTILITY OPERATED AND MAINTAINED FROM THE CITY SIDE OF FARM CREEK AND THE RAILROAD AND OUTSIDE THE INFLUENCE OF FARM CREEK, THE MAIN CULPRIT OF MANY MAINTENANCE ISSUES THAT AFFECT THE PERFORMANCE OF THE EXISTING TRUNK SEWER, INCLUDING THE ISSUE OF INFLOW & INFILTRATION A MAJOR PROBLEM WITH THE CITY'S EXISTING SANITARY SEWER SYSTEM
- ABILITY TO GRAVITY-SERVE THE FULL BUILD-OUT OF THE NEW 2023 COMPREHENSIVE PLAN
- PRESERVES DEVELOPABLE PROPERTY

THOUGH OUR EVALUATION CRITERIA WAS NOT WEIGHTED IT WAS APPLIED EQUALLY AND CONSISTENTLY TO ALL ROUTES.

### **EVALUATION CRITERIA (SHOULD BE):**

- SELECTED AND WEIGHTED EARLY WITHIN A PROFESSIONAL DESIGN PROCESS USING CONSENSUS-BASED METHODOLOGY
- USED FOR THE IDENTIFICATION OF POTENTIAL ROUTE ALIGNMENTS TO BE INITIALLY CONSIDERED
- USED FOR THE EXPLORATION OF ADDITIONAL ALTERNATIVES FOUND IN THE PRELIMINARY DESIGN PROCESS
- USED IN MAKING DESIGN ADJUSTMENTS TO IMPROVE DESIGN OF BASE ROUTE ALIGNMENTS UNDER CONSIDERATION
- APPLIED EQUALLY TO ALL ROUTE ALIGNMENTS UNDER CONSIDERATION IN THE FINAL EVALUATION PROCESS

#### OPEN-CUT VS. TRENCHLESS CRITERIA:

PIPE INSTALLATION MEANS & METHODS SHOULD BE APPLIED CONSISTENTLY AND EQUALLY TO ALL ROUTE ALIGNMENT ALTERNATIVES TO BEST DETERMINE RELATIVE COSTS. THE FOLLOWING CRITERIA WAS USED IN THE DETERMINATION OF TRANSITIONING THE MEANS AND METHODS OF PIPE INSTALLATION FROM OPEN-CUT TO TRENCHLESS:

- DEPTH OVER 30' (CONSISTENT WITH: STRAND'S PROFESSIONAL OPINION 7-26-2021 C.O.W. PRESENTATION TO COUNCIL)
- IMPAIRED U.S. WATERS AS LISTED ON IEPA'S SECTION 303.D LIST (OTHER CONSIDERATIONS COULD INCLUDE RIPARIAN BUFFER OF 50' FROM EACH BANK, ADJACENT WETLANDS AND BUFFERS PER USACE GUIDANCE, HIERARCHY OF U.S. WATERS AS LISTED: RELATIVELY PERMANENT WATERS (RPW) DIRECTLY CONNECTED TO TRADITIONAL NAVIGABLE WATERS (TNW), TRIBUTARIES TO RPWs, TRIBUTARY WETLANDS & BUFFERS, ETC.); THE GOAT SPRINGS TEAM USED ONLY FARM CREEK AS A U.S. WATER FOR TRENCHLESS CONSTRUCTION MEANS AND METHODS SINCE IT IS CONSIDERED AN IMPAIRED WATER AND A RPW DIRECTLY CONNECTED TO THE ILLINOIS RIVER (A TNW), ALSO AN IMPAIRED WATER. IF TRIBUTARY WATERS TO FARM CREEK ARE CONSIDERED FOR TRENCHLESS THEN THIS CRITERIA SHOULD BE APPLIED EQUALLY & CONSISTENTLY TO TRIBUTARY WATERS ON BOTH SIDES OF FARM CREEK.
- EXISTING DEVELOPMENT INCLUDING: RAILROADS, STREETS, PUBLIC UTILITIES, PRIVATE PROPERTY DEVELOPMENT
- FOREST PRESERVATION BEST MANAGEMENT PRACTICES (BMPs) BASED ON FOREST ASSESSMENTS OF TYPE AND MATURITY; GOAT SPRINGS TEAM CALCULATED BOTH SCENARIOS: LF OF ADDITIONAL TRENCHLESS FOR FOREST PRESERVATION AND WITHOUT IT AS A BASE COST USED IN THIS ANALYSIS.

### EVALUATION CRITERIA CONSIDERED BY GOAT SPRINGS TEAM ON PREVIOUSLY RECOGNIZED CITY ALIGNMENTS:

THE IDENTIFICATION OF THE FOLLOWING RELEVANT CRITERIA AS THE LOGIC USED TO JUSTIFY ROUTE ALIGNMENTS OUR TEAM CONSIDERED, NAMELY THE THREE CITY ROUTE ALIGNMENTS:

- SERVICE AREA: ABILITY TO GRAVITY-SERVE THE FULL BUILD-OUT OF THE NEW COMPREHENSIVE PLAN WHICH HAS A POPULATION EQUIVALENT OF APPROXIMATELY 98,925. USING THE PAST 10-YEAR TREND-LINE ANALYSIS, THE FULL BUILD OUT OF THE NEW COMPREHENSIVE PLAN PROJECTS TO TAKE APPROXIMATELY 884 YEARS. ALL ROUTES WITHIN THIS ANALYSIS MEET THE FULL BUILD-OUT OF THE NEW COMPREHENSIVE PLAN. THE NORTH SIDE OF THE CITY (U.S RT. 24 BYPASS SIDE) IS WHERE THE CITY'S GROWTH HAS TAKEN PLACE OVER THE PAST 20 YEARS.
- CROSSING OVER PRIVATE PROPERTY WITH EASEMENTS: THE FUNDAMENTAL CONSIDERATION FOR THE LOCATION OF EASEMENTS WAS PRESERVING PRIVATE PROPERTIES' ABILITY TO DEVELOP IN AREAS THAT ARE CONSIDERED DEVELOPABLE. FEMA 100-YR FLOOD MAPS/ FLOOD INSURANCE MAPS WERE USED AS A REFERENCE GUIDE FOR BASE ROUTE LOCATIONS SINCE ONE SIDE IS DEVELOPABLE AND ONE SIDE IS NOT. SINCE INFLOW AND INFILTRATION HAS BEEN A MAJOR ISSUE (2,040% ON PAGE 33 WITHIN HAMILTON REPORT), PRIORITIZATION WAS GIVEN TO LOCATING THE ALIGNMENTS ON THE EDGE OF FLOOD PRONE AREAS THIS WAS AN OBVIOUS ASSUMPTION DUE TO THE ONGOING ISSUES THE CITY IS CURRENTLY DEALING WITH. THE ALIGNMENTS ON THE CITY SIDE OF FARM CREEK (NORTH SIDE) HAVE A LOT OF DESIGN FLEXIBILITY. SHOULD THE CRITERIA BE WEIGHTED IN A MANNER WHERE FLOOD PRONE AREAS ARE NO LONGER AN ISSUE, SIMPLE ALIGNMENT ADJUSTMENTS COULD EASILY BE MADE THAT MIGHT ALSO SAVE INITIAL INSTALLATION COSTS. EXISTING DEVELOPMENT ON PRIVATE PROPERTIES WAS ALSO CAREFULLY CONSIDERED ALONG WITH ACCESS TO THE NEW CITY UTILITY. PERMANENT ACCESS TO THE COUNTY ROUTE (STRAND B) IS STILL UNDETERMINED AND WILL MOST LIKELY INTERFERE WITH PRIVATE PROPERTY AREAS OUTSIDE THE PLANNED EASEMENTS.
- <u>CRITERIA USED IN THE EVALUATION OF ALL PREVIOUSLY RECOGNIZED ROUTE ALIGNMENTS</u> BY THE GOAT SPRINGS TEAM ALSO INCLUDED:
  - ACCESS/ LOCATION RELATIVE TO USERS AND MAINTENANCE
  - ENVIRONMENTAL IMPACTS
  - CONSTRUCTABILITY
  - COST BOTH INITIAL CONSTRUCTION COST AND LONG-TERM COST

IDENTIFYING ROUTE ALTERNATIVES THAT STRUCK A GOOD BALANCE WITH ALL CONSIDERED CRITERIA WAS THE LOGIC USED IN THIS STUDY. THAT CRITERIA INCLUDED: CONSIDERATION OF DEVELOPABLE VS. NON-DEVELOPABLE LAND, PRIMARY USERS OF THE UTILITY, INFLOW AND INFILTRATION POTENTIAL, ACCESS FOR MAINTENANCE AND REPAIRS, COSTS - BOTH INITIAL CONSTRUCTION COSTS AND LONG-TERM COSTS, CONSTRUCTABILITY AND ENVIRONMENTAL IMPACTS.

## **GENERAL INFORMATION**

#### INCOMPLETE & MISSING INFORMATION:

OTHER MAJOR ITEMS MISSING INCLUDE:

- DECOMMISSIONING EXISTING TRUNK LINE SEWER BOTH SCOPE AND COSTS INCLUDING BUT NOT LIMITED TO:
  - ACCESS PLANS AND ACCESS EASEMENTS
  - REMOVAL OF EXISTING PIPE FROM 20 FARM CREEK CROSSINGS TO 10' BEYOND BANK, CAP & STABILIZE; RESTORATION
  - REMOVAL OF ALL MANHOLE STRUCTURES TO 4' MINIMUM BELOW EXISTING GRADE AND CAP
  - FILL WITH FLOWABLE FILL ALL EXISTING PIPE/ MH STRUCTURE VOIDS
  - RESTORATION OF ALL ACCESS PATHS AND REMOVAL AREAS
  - WETLAND & STREAM BANK MITIGATION
- PROJECT SITE ACCESS AND RESTORATION; PERMANENT ACCESS EASEMENTS FOR FUTURE OPERATION AND MAINTENANCE
- FOREST PRESERVATION & RESTORATION PROFESSIONAL ASSESSMENTS AND DOCUMENTS SUPPORTING BEST MANAGEMENT PRACTICES; CONSTRUCTION TECHNIQUES, MEANS AND METHODS SUPPORTING FOREST BMPs
- COMPLETE DOCUMENTATION SCOPE AND COSTS ASSOCIATED WITH TIE-IN OF ALL TRIBUTARY SEWER EXTENSIONS
- SOIL TESTING, DEWATERING REQUIREMENTS, ADDITIONAL PROFESSIONAL ENGINEERING
- MITIGATION COSTS WETLAND AND STREAM BANK MANDATED BY PERMITTING AGENCIES
- EASEMENTS; PERMITS; PROJECT FINANCING (MEETING WASTEWATER LOAN PROGRAM REQUIREMENTS)

MANY UNKNOWNS AND MAJOR COST OMISSIONS (STRAND ROUTE B) EXIST. A LOT OF WORK REMAINS TO BE COMPLETED.

DATE: 8-23-2023

# CITY RT. - S. ALT. (GOAT SPRINGS TEAM (G.S.T.) L-3 Profile generated using Lidar. Forest profile generated from G.I.S. TRENCHLESS LOCATIONS 65' + DEPTH/ PRIVATE PROPERTY 40' + DEPTH/ FORESTED UPLANDS IMPROVEMENTS (5) FORESTED UPLANDS RIPARIAN EMBANKMENT/ FORESTED PRIVATE PROPERTY 11,850 L-3 PROFILE Profile generated using Lidar. DATE: 8-23-2023 PHASE 2B TRUNK SEWER ALIGNMENT ANALYSIS WASHINGTON, ILLINOIS PREPARED BY: GOAT SPRINGS TEAM APTIM 21

# KEYED NOTES (TO HAMILTON'S MATRIX OF ALTERNATIVES (PG. 21)

= KEYED NOTE - SEE PAGE 21

(1)

- NORTH SIDE IS THE CITY SIDE; SOUTH SIDE IS PRIMARILY COUNTY SIDE

(1A)

- ROUTE IS MOSTLY WITHIN COUNTY JURISDICTION; RURAL; RESIDENCES ON PRIVATE SEPTIC

(1B)

- ROUTE IS MOSTLY WITHIN CITY LIMITS; WITHIN/ ADJACENT TO EXISTING DEVELOPMENT; RESIDENCES PRIMARILY ON CITY UTILITIES INCLUDING DEPENDENT UPON PUBLIC SEWER SYSTEM

(1C)

- ROUTE IS MOSTLY WITHIN CITY LIMITS; WITHIN/ ADJACENT TO EXISTING DEVELOPMENT; RESIDENCES PRIMARILY ON CITY UTILITIES INCLUDING DEPENDENT UPON PUBLIC SEWER SYSTEM

2 (2A) (2B) (2

- ALL NEW ROUTE ALIGNMENTS GRAVITY-SERVE THE POPULATION EQUIVALENT OF 98,000+ DERIVED FROM THE NEW 2023 COMPREHENSIVE PLAN.

3) -

- THIS ANALYSIS IN HAMILTON'S DRAFT REPORT APPEARS TO BE INCORRECT. THE FOLLOWING DATA WAS OBTAINED FROM THE DESIGN DRAWINGS AND REPRESENTS TRUTH IN DEPTH MEASUREMENTS

3A

- MOST AMOUNT OF TRENCHLESS OF ALL NEW ROUTES AT 31% OF ROUTE/ DEEPEST OPEN-CUT AVG. OF REMAINING ROUTE AT 20.6'/ DEEPEST MH AT 46' DEEP/ DEEPEST MH AVG. AT 22.5' DEPTH

3B

- LEAST AMOUNT OF TRENCHLESS OF ALL NEW ROUTES AT 16% OF ROUTE/ 2ND DEEPEST OF OPEN-CUT AVG. OF REMAINING ROUTE AT 19.6'/ DEEPEST MH AT 33' DEEP/ 2ND DEEPEST MH AVG. AT 20.7' DEPTH

(3C

- 2ND MOST AMOUNT OF TRENCHLESS OF ALL NEW ROUTES AT 17% OF ROUTE/ SHALLOWEST OPEN-CUT AVG. OF REMAINING ROUTE AT 18.2'/ DEEPEST MH AT 44' DEEP/ SHALLOWEST MH AVG. AT 19.9' DEPTH

4

- THIS ANALYSIS IN HAMILTON'S DRAFT REPORT APPEARS TO BE INCORRECT. THE FOLLOWING COSTS WERE OBTAINED FROM QUANTITY TAKEOFFS WITHIN THE DESIGN DRAWINGS AND USING STRAND'S UNIT COSTS

**4**A

- \$10.1 M & MOST EXPENSIVE IN MISSING COSTS CATEGORY - SEE PAGE 4, 5.00 - MISSING PROJECT COSTS

(4B)

- \$8.1 M & 2ND MOST EXPENSIVE IN MISSING COSTS CATEGORY - SEE PAGE 4, 5.00 - MISSING PROJ. COSTS

4C)

- \$8.2 M & LEAST EXPENSIVE IN MISSING COSTS CATEGORY - SEE PAGE 4, 5.00 - MISSING PROJECT COSTS

5

- THIS ANALYSIS IN HAMILTON'S DRAFT REPORT SEEMS SUBJECTIVE WITHOUT FURTHER EXPLANATION. CITIZENS WHO LIVE IN THE CITY LIMITS ON R.O.W.S SHOULD EXPECT INFRASTRUCTURE UPGRADES.

5A 5B 5

- ACCESS TRAFFIC, CONST. NOISE, AND LANDOWNERS ON BOTH SIDES OF FARM CREEK AFFECTED

6

- ACCESS APPEARS TO BE MORE COMPLEX AND DIFFICULT ON THE COUNTY SIDE/ SOUTH SIDE OF THE TRACKS SINCE IT IS RURAL WITHOUT ROADWAYS, BLOCKED BY FARM CREEK AND THE RAILROAD FROM CITY PROPER - SEE PAGE 5, DESIGN CRITERIA, NEXT TO LOCATION/ ACCESS

 $\overline{7}$ 

- THIS ANALYSIS IN HAMILTON'S DRAFT REPORT APPEARS TO BE INCORRECT. CONSTRUCTABILITY CONSIDERATIONS ARE HIGHLIGHTED ON PG. 5, DESIGN CRITERIA, WITHIN CONSTRUCTABILITY, 15 CATEGORIES

(7A)

- WORST

7B)

- DECENT

7C)

- BEST

8

- CORRECTING THE RANKINGS FOR NEW ROUTES ONLY, WITHOUT WEIGHTED CRITERIA, BASED ON THE ANALYSIS PERFORMED BY THE GOAT SPRINGS TEAM YOU GET THE FOLLOWING RE-RANKED ALIGNMENTS:

(8A)

- LAST - COUNTY ROUTE (STRAND ROUTE B)

8B

- SECOND - CITY ROUTE - SOUTH (G.S.T. L-1)

8C

- BEST - CITY ROUTE - NORTH (G.S.T. E-3)

PHASE 2B TRUNK SEWER ALIGNMENT ANALYSIS WASHINGTON, ILLINOIS

PREPARED BY: GOAT SPRINGS TEAM

DATE: 8-23-2023

20

CITY OF WASHINGTON - FARM CREEK TRUNK SEWER - THIRD PARTY ANALYSIS **HCE JOB NO. 21911** 2/15/2022

APPENDIX A. MATRIX OF ALTERNATIVES

# = KEYED NOTE - SEE REMARKS ON PAGE 20

**DRAFT** 

MATRIX OF ALTERNATIVES: "1" = BEST. "7" = WORST

41	

MATRIX O	F ALTERNA	TIVES: "1" = BEST, "7"	= WORST	(1)	(2)	(3)		4	)				(	5)		6			_	(8)
ALTERNATIVE	DESCRIPTION		LOCATION	NORTH OR SOUTH OF RR	INCREASE IN AREAS SERVED?
